↑ ABSTRACT

Value Prediction is a relatively new technique to increase instruction-level parallelism by breaking true data dependence chains. A value prediction architecture *produces* values, which may be later *consumed* by instructions that execute speculatively using the predicted value. This paper examines selective techniques for using value prediction in the presence of predictor capacity constraints and reasonable misprediction

ACM Digital Library

A half century of pioneering concepts
and fundamental research have been
digitized and indexed in a variety of
ways in this special collection of works
published by ACM since its inception.
The ACM Digital Library includes
bibliographic information, abstracts,
reviews, and full texts.
